#### 04 . Information on the breeding scheme and propagation of the variety \*

##### 04 . 01 . Type of material \*

(this question could be confidential)

- hybrid
- cross-pollinated variety
- self-pollinated variety
- parent line

##### 04 . 01.01 . Parental line use \*

(this question could be confidential)

In many cases there is a link in morphological expression of characteristics between the parent line and its hybrids. Therefore, it is recommended to provide information about the identity of hybrid varieties where the parental line is used. This makes the organisation of the technical examination more efficient and lowers the risk of an additional year at the costs of the applicant. This information will be dealt with confidentially and only share with the examination office in charge of the technical examination.

Please indicate for the production of which hybrid  
variety(ies) the parental line is used
