Technical questionnaire

Brassica oleracea L. convar. capitata (L.) Alef. var. rubra (L.) Thell.

Version 9 - Publication date: 12/06/2024 Mandatory fields or sections are marked with a composition of the breeding scheme of the composition of the variety of the parental line use. In many cases there is a link in morphologits hybrids. Therefore, it is recommended where the parental line is used. This make and lowers the risk of an additional year confidentially and only share with the example of the parental line is used. Please indicate for the production of which hybrid variety(ies) the parental line is used. * O4.02. Method of propagation of the variety of the variety of the propagated of the variety of the parental line is used. Please specify	
O4.01. Type of material * O hybrid O cross-pollinated variety O self-pollinated variety O parent line O4.01.01. Parental line use * In many cases there is a link in morphologits hybrids. Therefore, it is recommended where the parental line is used. This main and lowers the risk of an additional year confidentially and only share with the example of the production of which hybrid variety(ies) the parental line is used * O4.02. Method of propagation of the varied of seed propagated O vegetatively propagated O4.03. Other information on genetic original cases.	
O4.01. Type of material * O hybrid O cross-pollinated variety O self-pollinated variety O parent line O4.01.01. Parental line use * In many cases there is a link in morphologits hybrids. Therefore, it is recommende where the parental line is used. This make and lowers the risk of an additional year confidentially and only share with the example of the parental line is used Please indicate for the production of which hybrid variety(ies) the parental line is used * O4.02. Method of propagation of the variety of the variety of the parental line is used O seed propagated O vegetatively propagated	n asterisk (*)
 hybrid cross-pollinated variety self-pollinated variety parent line 04.01.01. Parental line use* In many cases there is a link in morphologits hybrids. Therefore, it is recommended where the parental line is used. This make and lowers the risk of an additional year confidentially and only share with the example of the production of which hybrid variety(ies) the parental line is used * 04.02. Method of propagation of the varied seed propagated vegetatively propagated 04.03. Other information on genetic origin 	and propagation of the variety
 cross-pollinated variety self-pollinated variety parent line 04.01.01. Parental line use* In many cases there is a link in morpholo its hybrids. Therefore, it is recommende where the parental line is used. This make and lowers the risk of an additional year confidentially and only share with the example of the production of which hybrid variety(ies) the parental line is used * 04.02. Method of propagation of the varies of seed propagated vegetatively propagated 04.03. Other information on genetic origin 	
 self-pollinated variety parent line 04.01.01. Parental line use * In many cases there is a link in morphologits hybrids. Therefore, it is recommende where the parental line is used. This make and lowers the risk of an additional year confidentially and only share with the example of the production of which hybrid variety(ies) the parental line is used * 04.02. Method of propagation of the variety of the parental line is used vegetatively propagated vegetatively propagated 04.03. Other information on genetic original 	
O parent line 04.01.01. Parental line use* In many cases there is a link in morphologits hybrids. Therefore, it is recommended where the parental line is used. This make and lowers the risk of an additional year confidentially and only share with the example of the production of which hybrid variety(ies) the parental line is used * 04.02. Method of propagation of the variety of seed propagated vegetatively propagated O vegetatively propagated 04.03. Other information on genetic original	
In many cases there is a link in morphologits hybrids. Therefore, it is recommende where the parental line is used. This make and lowers the risk of an additional year confidentially and only share with the example of the production of which hybrid variety(ies) the parental line is used * 04.02. Method of propagation of the variety seed propagated vegetatively propagated 04.03. Other information on genetic original services.	
In many cases there is a link in morphologits hybrids. Therefore, it is recommende where the parental line is used. This make and lowers the risk of an additional year confidentially and only share with the example of the production of which hybrid variety(ies) the parental line is used * 04.02. Method of propagation of the variety seed propagated vegetatively propagated vegetatively propagated	
Please indicate for the production of which hybrid variety(ies) the parental line is used * 04.02. Method of propagation of the varie Seed propagated vegetatively propagated 04.03. Other information on genetic origin	
which hybrid variety(ies) the parental line is used * 04.02. Method of propagation of the varie Seed propagated vegetatively propagated 04.03. Other information on genetic origin	ogical expression of characteristics between the parent line and d to provide information about the identity of hybrid varieties ses the organisation of the technical examination more efficient at the costs of the applicant. This information will be dealt with amination office in charge of the technical examination.
 04.02. Method of propagation of the varie Seed propagated vegetatively propagated 04.03. Other information on genetic origin	
 seed propagated vegetatively propagated 04.03. Other information on genetic origin	
vegetatively propagated04.03. Other information on genetic origin	ty*
04.03. Other information on genetic origin	
Please specify	ı and breeding method
	ponding characteristic in the CPVO Technical Protocol; please ma
the state of expression which best correspor(1) 05.01. Plant: height *	ius).
1 - very short
